The market for major contractors has been growing slowly but steadily for the past few years. However, this has not resulted in contractors abandoning the lessons learned during the aftermath of the economic meltdown, in 2008. If anything, owner expectations that construction is still a bargain and the prospects of a growing worker shortage have left contractors continuing to search for ways to do more with less.

For ENR's Top 400 Contractors, 2014 was a pretty good year. As a group, the Top 400 generated \$331.94 billion in contracting revenue in 2014, an increase of 2.4% from 2013's \$324.16 billion. The figure is still below the record \$338.38 billion in 2008 contracting revenue reported in our 2009 Top 400.

Domestic contracting revenue accounted for the Top 400's overall increase this year, rising 7.8% in 2014, to \$268.82 billion, while international contracting revenue fell 15.6%, to \$63.12 billion. The international market saw major declines in projects in the minerals-and-mining, petroleum and power sectors.

Bechtel continued its dominance on the Top 400, ranking at No. 1 for the 17th consecutive year. However, low oil prices and a decline in the minerals-and-mining sector have had a significant impact on its markets. "We did see some big energy proposals that we hoped to be awarded in 2014 that have been pushed back to this year," says Brendan Bechtel, president and

**"The intense competition does not seem to be decreasing even though the construction industry has started to rebound. There seems to be a lack of confidence in the strength of the recovery."**

Kevin McCarthy,  
CEO, PC  
Construction

COO. He says no prospects have "evaporated," but schedules have become more measured.

That does not mean that work in oil and gas has dried up. On May 18, Bechtel received the notice to proceed on two trains of the \$9-billion Corpus Christi Liquefaction project for Cheniere Energy in Texas. "This is the first greenfield export liquefaction facility in the U.S., rather than a conversion of an import facility," Bechtel says.

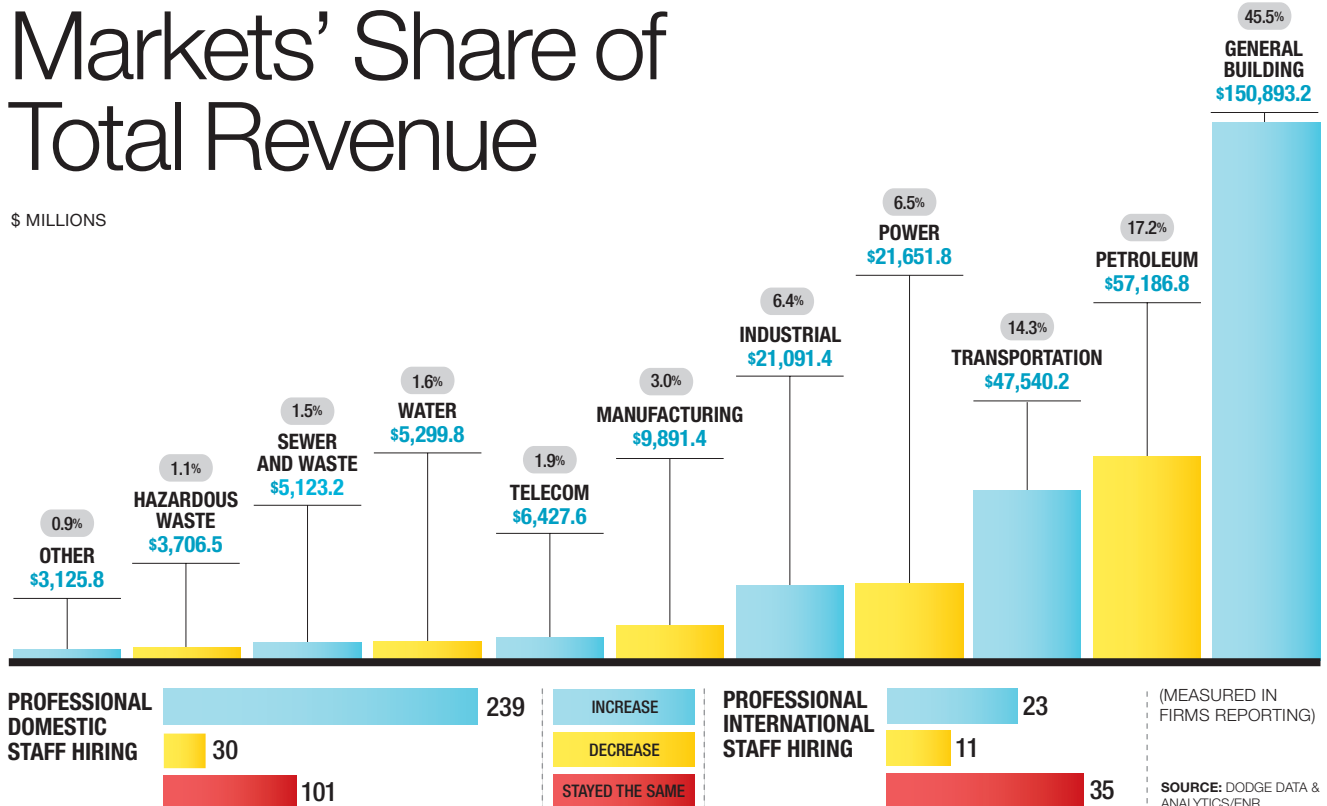

Bechtel also reorganized its business units at the end of 2014, consolidating its global power and infrastructure units, while assigning its nuclear-power division to its government group. "When talking to governments of developing countries, they generally ask how we could upgrade both their power and rail systems, so it made sense to combine the power and infrastructure units into a single entity," Bechtel says.

One major development in U.S. contracting was AECOM acquisition of URS Corp., San Francisco, which ranked at No. 17 on last year's Top 400, and of Hunt Construction Group, Scottsdale, Ariz., which ranked at No. 50 on last year's list. Combining the two with Tishman Construction, which AECOM acquired in 2010, has created a major new contracting presence.

The Tishman-Hunt team is particularly synergistic, says Dan McQuade, group president of AECOM building construction. "Hunt brings to Tishman ex-

# Markets' Share of Total Revenue

\$ MILLIONS

perience in sports, health care and aviation, along with a national footprint. Tishman gives Hunt a new presence on the East Coast and in the international market and its experience in the commercial and multi-unit residential markets," he says, adding that there is "amazingly little overlap between the two companies."

## Competition

While the markets in the U.S. are growing, many large contractors still are feeling competitive pressures. Client expectations that construction is still a bargain and competitors' tough bidding have many contractors shaking their heads. "The intense competition does not seem to be decreasing, even though the construction industry has started to rebound. There seems to be a lack of confidence in the strength of the recovery," says Kevin McCarthy, CEO of PC Construction.

While some contractors possess an improved backlog and have adjusted their pricing accordingly, others that have not been as successful are continuing to price the delivery of work below a sustainable level. "These outliers make it difficult to reestablish 'normal' in the marketplace," says Gordon Lansford, president and CEO, JE Dunn Construction.

Even in the big-ticket international marketplace, competition has been intense. "Competition is fierce, but that is the nature of construction," says Bechtel.

## 363

Firms on the list that sent in surveys in 2014.

## 66.4%

Firms that increased revenue in 2014 over 2013.

## 33.1%

Firms that had lower revenue in 2014 than in 2013.

He also says there are times when client expectations do not match realistic project execution. Bechtel says his biggest concern is facing "irrational actors" determined to maintain volume at any cost. "We haven't seen a race to the bottom yet," he observes, but, if the energy market continues to be soft, he fears there may be an increase in unsupportable bids.

Competition remains strong in most sectors, although some contractors are beginning to see an increase in their market backlogs. "Owners are still very price-conscious but are also driven by getting the right match of talent for their projects," says Robin Savage, COO of Robins & Morton.

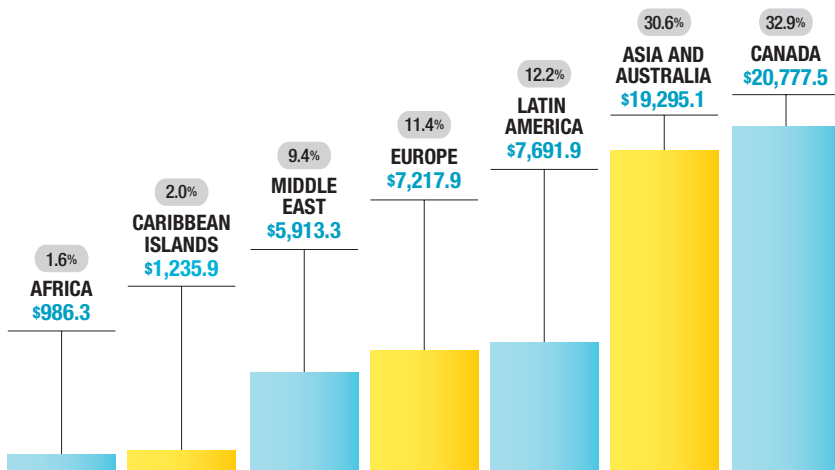

The gradual buildup of backlog has given many large contractors the freedom to pick and choose. For example, Messer Construction has opted for a more controlled and consistent growth rate, says Tim Steigerwald, senior vice president. "Despite the increased volume of work in the marketplace, we have made the decision to only pursue a certain volume of it in order to support our company's long-term growth plan."

Ferrovia Agroman US is another firm that is being selective, according to Daniel J. Filer, vice president of business development. In Ferrovia's markets, competition on hard-bid transportation projects has been fierce, he notes. But now design-build and even public-private-partnership projects also are becoming

## Turner Ups Its Design Savvy

The Turner Corp. (**No. 3**) has been implementing lean construction principles to promote efficiencies in their design-build projects, such as the 188,000-sq-ft office facility and 360,000-sq-ft parking garage for Celgene Corp., located in Summit, N.J. (above).

Turner now is making a new move to enhance its ability to find design efficiencies, especially in design-build projects: It is forming an in-house engineering group.

"Design-build is now about 10% to 15% of our business, and we want to be able to work shoulder-to-shoulder with the other designers," says Pat Di Filippo, executive vice president. He says Turner Engineer-

ing is not intended to take a lead role in doing the design work but simply will provide knowledgeable assistance to design partners. Di Filippo says the firm hopes to have the group in place later this summer.

For the new group, Turner plans to hire up to 70 engineers, including project engineers and a cadre of about 20 specialists, based out of the New York City office, to assist on specialized technical issues.

To increase design efficiency or cut costs, Turner might make suggestions that lead to disagreements with the lead designers, Di Filippo notes, adding, "You need expertise in-house to be able to argue your point effectively." ■

competitive. "Our strategy for success is to continue to pursue projects where we bring value to the project and not chase everything that moves," he says.

### Lean, Mean Contracting Machine

Although many contractors say margins are slowly creeping up, concerns about a lack of staffing and the expected resulting rise in labor costs have contractors wary. So, more firms are seeking ways of improving productivity through process improvements. Many firms are beginning to embrace lean process techniques as a way to squeeze out waste.

"We are implementing lean techniques throughout the company," says Pat Di Filippo, executive vice president of Turner Construction. He says the firm is analyzing numerous methods for eliminating waste. For example, Turner is using modular subassemblies so that everything above the ceiling is manufactured in outside shops, shipped to the site and installed as the component is needed.

Careful scheduling of material and supply deliveries is another lean technique. "We track schedules carefully on tablets and bring the assemblies in only when it is ready to install. That way, nothing touches the floor," Di Filippo says.

SpawGlass is another proponent of lean construction, according to Joel Stone, CEO. "We have driven lean into all aspects of our business, and we are beginning to see the product of our investment." Stone estimates that, through the use of lean on one of its projects, SpawGlass was able to achieve a work-in-place volume per day of half a million dollars.

Prefabrication increasingly is becoming a critical tool in lean construction practice. Measuring project

# The Top 400 Dialogue

## How are your relations with subcontractors and suppliers?

**GREG CARLSON, VICE PRESIDENT**  
**BURNS & MCDONNELL**  
Kansas City, Mo.

Due to the recession, many subs and suppliers went out of business, resulting in a shrinking pool of qualified and financially stable firms. Subcontractors that survived the downturn are now busier than they've been in years.

**GORDON LANSFORD, CEO**  
**JE DUNN CONSTRUCTION**  
Kansas City, Mo.

Subcontractors are anxious to fill their backlog. We pay particular attention to the current book of business that our subcontractors have and their ability to deliver that work within the project schedule, price and their financial health.

**STEPHEN GRAY, CEO**  
**GRAY CONSTRUCTION**  
Lexington, Ky.

We have seen some signs of financial distress among a small percentage of subcontractors. While this trend has been forecast for the past few years following the financial crisis, it's emerged much later than we expected.

**RICK WHITNEY, CEO**  
**ADOLFSON & PETERSON CONSTR.**  
Minneapolis

The largest current concern is the bifurcation of the subcontractor base into solid and financially sound companies and those that are more transactional in their approach, [requiring] stringent prequalifications and risk mitigation.

**WILLIAM H. GOODRICH, CEO**  
**LECHASE CONSTRUCTION SERVICES**  
Rochester, N.Y.

We've established an accelerated payment plan to help our subcontractors. Within our firm, we created a liaison between our subcontractors and vendors, aiding in payments, bidding opportunities and overall communications.

## What are your strategies for succeeding in a growing but uncertain market?

**SHAUN YANCEY, PRESIDENT**  
**PCL US OPERATIONS**  
Denver

Placing the right people on the right projects to ensure project success and employee workplace fulfillment. You also have to be selective in which projects you pursue, ensuring the right resources are available.

**TIM STEIGERWALD, SENIOR VP**  
**MESSER CONSTRUCTION CO.**  
Cincinnati

Skilled tradespeople make up nearly half of our workforce, showing our commitment to solving the labor shortage problem, attracting people back to the industry and helping them see construction as a rewarding career path.

**MIKE FORD, MANAGEMENT COMM.**  
**DPR CONSTRUCTION**  
Redwood City, Calif.

Our strategy in uncertain times is to focus on the types of projects and markets where we have the most experience and insight and to invest heavily in our talent, making sure DPR continues as a great place to work.

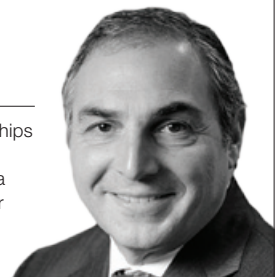

**BRAD DIMEO, CEO**  
**DIMEO CONSTRUCTION CO.**  
Providence, R.I.

We purposefully operate in a relatively small geographical region [that's] not specific to any market sector, so we can put a significant emphasis on building and maintaining high-quality, long-term relationships.

**STEPHEN D'ANGELO, CEO**  
**DCK WORLDWIDE LLC**  
Pittsburgh

Diversifying and developing strong relationships with clients has allowed us to be able to manage our portfolio so that a downturn in a specific market or region doesn't impact our entire business.

performance in the field using various scanning technologies, as well as lean processes and prefabrication, contribute to “enhancing our understanding of field production and continuing to wring waste out of the process of construction,” says Brad Dimeo, CEO, Dimeo Construction Co.

An example of prefabrication is Messer Construction’s \$189-million Joint & Spine Center project at the Christ Hospital Health Network, Cincinnati, which is using prefabricated restroom units and mechanical racks. “The use of prefabricated restroom units, for example, eliminates the need for multiple trades in a small restroom area down the stretch of the project, meaning a safer work environment and fewer scheduling issues,” says Steigerwald.

## Fueling Uncertainty

The drop in fuel prices has both caused pain and opened up prospects for contractors. Firms in the oil-and-gas sector have experienced delays on many projects as oil producers try to gauge where the market for oil is going. But contractors in other markets are monitoring fuel prices to see if their firms will be affected.

“We expect some cutbacks in capital expenditures from our refining customer base as a natural market response to the crude-oil price decline,” says Keith

**“We have about \$800 million [of work in Canada], and that is a big P3 market. [That work] will help prepare us when P3 projects start to break here in the U.S. If you wait until a trend like P3 starts making headway, you are already behind.”**

Pat Di Filippo,  
Executive Vice  
President, Turner  
Construction

Manning, executive vice president of Zachry Group. However, he says midstream and downstream opportunities continue to be healthy. “Methane and ethane-driven projects in the petrochemical sector remain quite strong, as is LNG, and the power generation sector is moderate.”

“Both on the power generation and the process and industrial side, customers are remaining conservative,” says Michael P. McMahon, president of Day & Zimmermann. “While we’ve yet to see significant spend on new capital projects, we’re hoping that the continued recovery of the economy, combined with lower oil prices, may drive more investment in projects.”

The drop in oil prices has boosted some markets. For example, the airline industry has benefitted from lower fuel prices. “That savings goes right to the bottom line of the airlines,” says Richard Cavallaro, CEO of Skanska USA. He says some of the savings now are going into plans for airline-terminal expansions.

Manufacturing is another market that has gained from the recent lower oil prices. “Cheaper energy prices are luring a lot of manufacturers from overseas to build here in the U.S., particularly in the Midwest,” according to Mike Bolen, CEO of McCarthy Holdings. He notes that foreign manufacturers are particularly interested in building production

Bulley & Andrews (No. 222) relocated the landmark Harriett Rees House, Chicago, to allow for the development of an entertainment district. The 126-year-old, 762-ton building may be the heaviest-ever house removal in the U.S.

facilities here for products with local distribution.

Some contractors worry that the strengthening of the U.S. dollar against other currencies may blunt this foreign capital investment in the U.S. In the past 10 months, the euro has gone from \$1.38 to as low as \$1.07, and the Japanese yen has gone to 120 yen to the dollar from 96, raising the costs of foreign investment.

However, McQuade of AECOM says he has not seen a drop-off in foreign direct investment in the U.S. "There still is a lot of interest in Asia and the Middle East in investing in projects in the U.S. When there is a lot of turmoil in the world, overseas investors look to the U.S. as a safe haven," he says.

The power market should be a beneficiary of lower oil and gas prices. There now are signs of interest in converting plants to gas from other fuels. "Natural gas continues to be the driver for most new large-scale generation projects. The growing accessibility of domestic supply, relatively low prices and reduced carbon footprint are contributing to the increased number of projects being developed," says William F. Griffin Jr., CEO, Gemma Power Systems.

However, many contractors don't see a sudden rush to convert existing plants to gas or build greenfield plants. "I don't think we'll see any drastic changes in the near term in the power-generation industry," says

McMahon. But he agrees that most of the work continues to be focused on new natural-gas construction or coal-to-natural-gas conversions.

## Public-Private Patience

The promise of new work through the use of public-private partnerships in the U.S. has yet to be fulfilled. "The P3 market has yet to mature here the way it has in Europe and Canada," says McQuade of AECOM. He believes the market will grow as more federal and state regulations authorize P3 and they become more familiar to public agencies.

Turner Construction is planning to be ready when P3 projects become more commonplace in the

## On the Web

U.S. "A few years ago, we had very little work in Canada. Now, we have about \$800 million, and that is a big P3 market. [That work] will help us prepare when P3 projects start to break here is the U.S.," says Di Filippo. "We believe that, if you wait until a trend like P3 starts making headway, you are already behind the game."

Putting together P3 packages can be arduous. "We see a reliable pipeline of P3 projects coming over the next four to five years," says Cavallaro. He notes that Skanska has an advantage because it has a sister company that helps with financing P3 projects. Developing a P3 proposal is a long and expensive process, Cavallaro cautions, adding, "You have to choose care-

fully which P3 group and project to join. You can't lose too many of these bids because it will cost you."

## Worker Shortages

The biggest concern for contractors going forward is the expected shortage of workers. "The craft labor shortage is something we, as an industry, have spoken about for years but seem to have done little to improve. It is right at our front door now and may very well be the biggest challenge we face as work demands increase and the labor pool shrinks," says McCarthy of PC Construction.

Currently, firms point to pockets of worker shortages, such as in Texas and the Gulf Coast, Boston or Los Angeles. But many contractors say the problem will affect the entire industry. "It doesn't matter where you are in the country or if you work union or non-union, everybody is worried," says Bolen. "It is a national problem, but it is being handled on a local basis."

Some contractors hope immigration reform may help ease the problem. But Bolen warns against cutting corners in recruiting craft labor. U.S. Immigration and Customs Enforcement has been cracking down on the use of undocumented immigrant workers. "You have to be very careful to verify," he says. "It is the contractors that get sloppy with their employment verification processes that get into trouble."

There are many contractors that fear the work of their subs, feeling the pinch of labor shortages, may suffer. "We are experiencing more subcontractors using labor brokers to provide the capacity they are chasing. Unfortunately, in many instances, this labor

**"Our goal is to become the employer of choice in the industry to ensure our future workforce will be sufficient."**

Brendan Bechtel,  
President,  
Bechtel

force does not have an attachment to their employer and is more likely to have issues with productivity and working safely," says Rick Whitney, CEO of Adolfson & Peterson Construction.

Firms are taking a variety of approaches to attract and retain both new and experienced people. Bechtel is continuing its program to hire military veterans. "We are approaching 1,000 veterans hired. We believe it is important to help returning vets transition to good jobs here at home," Bechtel says. "Our goal is to become the employer of choice in the industry to ensure our future workforce will be sufficient."

Many contractors are taking steps to ensure they retain the staff they already have. For example, LeChase Construction is supplying career training and mapping for its employees and focusing on continued growth and promoting from within, says William H. Goodrich, CEO. "We've been very organic with growing our employees into leaders within the company."

Hoar Construction has invested in a new human-resources staff and technology to recruit and retain skilled superintendents, project managers, estimators, engineers and administrative staff, says Rob Burton, CEO. He says Hoar will "support our employees' careers with us through continued training, which helps with retention. Once we recruit and train great employees, we want to keep them."

Many contractors are partnering with local schools to foster industry recruitment. "We have established informal mentoring programs at our jobsites and regularly contribute surplus materials to the local tech-

nical schools for their training programs,” says Griffin of Gemma Power Systems.

Many contractors are gearing their employment practices to accommodate younger professionals to lure and retain them. “At Alston, we have created a culture that places high value on our people as whole, both at work and at home,” says Paul D. Little, CEO of Alston Construction. Maintaining an appropriate “work-life balance” is something the firm recognizes and values, he says.

## From Novelty to Necessity

Technology is no longer a value added or luxury; it is a necessity for business at all levels of the construction process, from design to project completion. PCL continues to look for new technologies to drive efficiencies in its business. For example, “we are working with new mobile applications to enhance our lean construction methods, specifically around Last Planner for pull planning,” says Shaun Yancey, president of PCL US Operations. He says PCL has staff working with software vendor Autodesk to develop a Last Planner app that staff can use via the web and on tablets.

As projects have grown larger and increasingly more complex, so has the size of their accompanying design documents. To operate more efficiently, many contractors are fully integrating the use of mobile devices in the field, allowing them to digitally access what would normally be reams of blueprints.

“Traditionally, if a superintendent is asked a question that he doesn’t readily have the answer to, he has to go back to the site office and search the paper plans. On a massive jobsite, that could take hours. With an iPad on hand, that process is reduced to minutes. We are seeing an average savings of two hours per day for each superintendent,” says Goodrich.

Contractors are jumping into the technology arena, investing in software, personnel and their own programming to streamline the construction process. Sellen Construction has created a new chief information officer position. The firm plans “a major investment in technologies that will increase our efficiencies in preconstruction and design, field operations, project management systems, and construction means and methods,” says Bob McCleskey, CEO.

Many contractors are developing their own apps to address both general and specific worksite needs. For example, Hill & Wilkinson General Contractors developed its own field application, the so-called Superintendent’s Work Center, which is available to all field personnel on smartphones and iPads, says Paul Driscoll, CEO.

ton and London to explore where technology can improve efficiency. "Right now, 3- and 4-D designs are common. We believe these innovation centers will push the limits of virtual project delivery and drive improvements in our integrated global EPC delivery model," says Bechtel.

## Holding the Line on Prices

Despite a growing market, materials prices have not seen a major surge. "We have not seen much change in large commodity costs," says Whitney of Adolfson & Peterson Construction. However, he says there have been spot shortages and delivery delays in some of the specialty products the company uses.

There is some expansion and contraction in the marketplace regarding material pricing. "For example, in February, we received a notification from a major

steel producer in the U.S. stating that some of their lighter shapes were being reduced in cost per ton," says Stephen Gray, CEO of Gray Construction. According to the notice, producers in other countries are trying to break into the U.S. market, and domestic mills are reducing prices to stay competitive, he says.

Contractors have been streamlining their processes to become more efficient, but so have materials and equipment suppliers. "Just-in-time [JIT] manufacturing practices, accompanied by JIT staffing, creates a delay in receipt of materials as demand for production has increased," says Kirk Warden, senior vice president at Clayco. He says this JIT approach affects the availability of everything from steel to toilet partitions. "No one is truly stocking product from manufacturing to distribution to the end user, creating a ripple effect for all involved in the supply chain." ■

## How to Read the Tables

**Companies** are ranked by construction revenue in 2014 in (\$ millions). Those with subsidiaries (†) are listed by company rank, which may be found on the ENR website at [www.enr.com](http://www.enr.com). Firms not ranked last year are designated as \*\*. Some markets may not add up to 100% due to omission of the "other" miscellaneous market category. NA= "not available."

**Figures** include prime construction contracts, shares of joint ventures, subcontracts, the construction portion of design-construct contracts and construction management-at-risk contracts when the firm's risks are similar to those of a general contractor. Figures also include the value of installed equipment when a firm has prime responsibility for specifying and procuring it within

the scope of its construction contract.

**General Building** includes commercial buildings, offices, stores, educational facilities, government buildings, hospitals, medical facilities, hotels, apartments, housing, etc.

**Manufacturing** includes auto assembly, electronic assembly, textile plants, etc.

**Power** includes thermal and hydroelectric power plants, waste-to-energy plants, transmission lines, substations, cogeneration plants, etc.

**Water Supply** includes dams, reservoirs, transmission pipelines, distribution mains, irrigation canals, desalination and potability treatment plants, pumping stations, etc.

**Sewerage / Solid Waste** includes sanitary and storm

sewers, treatment plants, pumping plants, incinerators, industrial waste facilities, etc.

**Industrial Process** includes pulp and paper mills, steel mills, non-ferrous metal refineries, pharmaceutical plants, chemical plants, food and other processing plants, etc.

**Petroleum** includes refineries, petrochemical plants, offshore facilities, pipelines, etc.

**Transportation** includes airports, bridges, roads, canals, locks, dredging, marine facilities, piers, railroads, tunnels, etc.

**Hazardous Waste** includes chemical and nuclear waste treatment, asbestos and lead abatement, etc.

**Telecommunications** includes transmission lines and cabling, towers and antennae, data centers and web hotels, etc.
